SALISBURY AUDIT REPORT

At the request of the Town of Salisbury, LightSmart Energy Consulting LLC conducted an audit of all streetlight locations within Salisbury Town limits to verify the existing wattages and collect other asset details including GPS coordinates. The audit revealed that 864 streetlights exist in Salisbury while the DPRS file (National Grid-NGRID- Inventory for Billing) lists **838** (2014 increased to 841 in 2017). Of the 864 in the field, 21 appear to be private lights and therefore would not be listed on the DPRS file. Of the 864 lights found in the field, the DPRS file contained 29 fixtures that do not exist in the field and three that potentially should not be on the inventory. Eighteen fixtures were found in the field that were not accounted for on the DPRS file. Of these 18, five are on Ocean Front North which we believe are private and three are on Corporal Patton Way (discussed further below). There were 18 additional lights on nine underground fed aluminum poles at the end of Beach Road that are unaccounted for and not included in the inventory list. They are separately metered and paid for by the Town.

The table below summarizes the audit findings.

Fixture	DPRS Count	Field Count Lights	Inventory Found	On DPRS Not in Field	In The Field Not on DPRS
50W HPS	515	531		10	12
100W HPS	136	118		4	1
150W HPS	8	9		1	
250W HPS	134	122		8	1*
400W HPS	2	1		1	
250W FL	4	2		1	
400W FL	14	14		4	3**
50w Post Top	25	25			
Grand Total	838	843		29*	18

Found Lights include one light on Inventory that is in a neighboring community, Congress Rd. Pole 1 and one that should be NGRID's (*Beach Road Pole 17-75). **On Ocean Front North likely private

Analysis of the audit findings indicates that there are 65 lights with wattages that differ from the DPRS file including the 29 that are on the DPRS file that do not exist in the field and the 18 that exist in the field but are not present on the DPRS file. The table on the following page summarizes the wattage discrepancy findings. The result of the wattage discrepancies combined with the missing lights results in the Town being over billed by approximately \$7,000 per year. The past procedure is to not report the lights found but not being charged until a further investigation is done. For example three of these lights are on Corporal Patton Way that became an accepted street in 2006. Prior to that time someone other than the Town was paying for those lights. The streetlight bill shows 841 lights verses the inventory of 837 so it is possible these three lights were added but the inventory data was not updated. Clearly now that the Town has accepted that street the Town should pick them up and they should be part of the conversion project. There are also some new lights on metal poles on Broadway and Beach Road not on the list but they are likely metered and not included in this analysis. Keep in mind that the lights on Ocean Front North are included and if these are

private then the numbers would be adjusted by \$1,706.10 in the Town's favor. There is some confusion as to where Ocean Front South becomes Ocean Front North.

Billing Wattage Deviations

Fixture	DPRS Wattage Count	Inventory Actual Wattage Count
50W HPS	12	27
100W HPS	20	2
150W HPS	1	2

*Does not include "No Fixture"

There are currently 24 streets out of 104 containing streetlights where multiple wattages occur on the same street. The goal is to reduce the number of variations on a street to create more uniformity in the lighting, reduce inventory needs, and simplify maintenance operations while preserving lighting levels and accommodating for concerns such as high pedestrian activity or other conditions requiring higher than usual lighting levels.

Multi Wattage Streets

Street	Fixture Wattages								Total Lights

Toll Road			2	1					3
Vermont Street			2				1		3

The streets highlighted in Yellow are the main arterials and ordinarily we would want higher lighting levels on these routes due to higher speeds. We recommend the Town needs to look at these streets and determine what might be required. LightSmart can provide some guidance to assist in this effort if needed. There is also some confusion around some street names such as Lafayette, Toll Road and High Street and where each begins and ends north of True Cemetery. The inventory lists Railroad#1 as a street that no longer exists and is now the north south section of Gardner. These should be sorted out so the inventory once finalized is consistent with street names. In many instances the lights are so widely separated they really only serve a limited purpose such illuminating an intersection. In cases such as this there is no need for an inordinately bright light just sufficient to alert there is an intersection and to be able to read the street sign to ease navigation. Where not needed, brighter lights should be reduced in wattage to save energy costs and to reduce excessive glare.

The Town is currently being billed for 417,327 kWh per year for the main streetlight account. This would be reduced by roughly 60-65% if the lights were converted to LED technology. The savings from transitioning to the customer owned would save the Town approximately \$38,000 per year net of maintenance and conversion to LED technology would both reduce the maintenance costs and the energy costs increasing the savings to over \$90,000 per year depending on the final lighting design. The energy savings from the project would generate another \$65,000-70,000 in incentives from NGRID plus the

incentive from the MAPC. Keep in mind the MAPC incentive ends this calendar year so the project must be completed by December 31st. This may be problematic as the Town just notified NGRID of their intent to acquire the lights and NGRID is still dealing with requests from last year. It will be critical to have everything in position to commence the project the same day the transfer of assets to the Town is complete. The MAPC will have no funds after march of 2019 and they have indicated communities must sign up before 30 June 2018 to qualify.

As a minimum the Town should select LED fixtures that are control ready and have the 7 pin photocell receptacle. I would also recommend that the lights be capable of being increased or decreased in brightness through an internal adjustment capability. This will provide for the ability to respond to citizen requests as well as in the future, should the Town add intelligent controls, the ability to adjust light levels as needed. As an example the area down by the beach could be brighter during the tourist season but dimmer when activity levels are lower. Likewise if there is an emergency, the lights in the area of the emergency could be increased in brightness to assist emergency workers. Once NGRID adopts a dimming tariff and recognizes the metering capability of intelligent controls, the Town could dim the lights after certain hours to increase savings. It will be important to select the right fixture to stay within the optimum operating range but at the same time one that falls in the lower cost billing tier.

LightSmart Energy Consulting will coordinate with the Town to transfer the results of the survey in the form of a shape file for the Towns GIS data base. We have already alerted NGRID as to the issues we found in an effort to speed the corrections to the billing and to begin the process for collecting refunds for the overcharges.

Exhibit A Inventory.
Supplied separately as an excel file

Note items in red are lights on the NGRID inventory that are not present. Items highlighted in yellow are lights in the filed that should be on the inventory.

Exhibit B

Lights found in the field not on the inventory Please note included here are the poles on Ocean Front North Street which are most likely private and Corporal Patton Way neither of which are included in Exhibit A. Corporal Patton Way should be added to the inventory.
